

## Roller Mill Wheels

These are the wheels found in the Geoff Hampton Grain Roller Mills. There are two of them which are specially formulated from cast steel, giving them their hard wearing characteristics making them longer lasting.

These wheels do not have any groves machined into them. As such there is no need to get them re-grooved. Less down time and a better sample produced.

The diameter of these wheels will produce an excellent sample for you.

“I personally guarantee that our Grain Roller Mill will give you excellent results and I am proud to stand by this.”
