

# Felt the barrel of your Harmony Liners?

## DeLaval Harmony Liners Patented micro-textured barrel

If you have then you would have noticed the unique micro-texture on the barrel of the liner. This texturing is unique to DeLaval Harmony Liners. But why go to all the bother of texturing a barrel of a milking liner?

As you know, rubber absorbs fat. It is this absorption of fat that can alter the milking performance of the liner. What our research has shown is that applying this micro-texture to the barrel evens out the dispersion of this fat.

More even fat dispersion means less material swelling and therefore gives a more even milking performance throughout the liner life. This in turn ensures optimal milk extraction and therefore more profit to the farmer.

**To discuss how the micro-textured barrels of Harmony Liners can maximise your profits talk to your local DeLaval dealer.**
